Classifying Quadrilaterals

Fourth Grade - Geometry - Classifying Quadrilaterals - WKS-05

Name	
Date//_	
Period	Score

<u>Circle every descriptive term that relates to the figure shown.</u> Then write the most descriptive name for that figure. Assume that all sides that appear parallel are parallel and all angles that appear right are right.

1.	2.	3.
	2.	J.
• Four sides	 Four sides 	 Four sides
 One set sides parallel 	 One set sides parallel 	 One set sides parallel
• Two sets sides parallel	• Two sets sides parallel	• Two sets sides parallel
 All right angles 	 All right angles 	 All right angles
 All sides lengths congruent 	 All sides lengths congruent 	 All sides lengths congruent
Name:	Name:	Name:
4.	5.	6.
< >		
○ Four sides	o Four sides	• Four sides
 One set sides parallel 	 One set sides parallel 	• One set sides parallel
 Two sets sides parallel 	• Two sets sides parallel	 Two sets sides parallel
 All right angles 	 All right angles 	 All right angles
 All sides lengths congruent 	 All sides lengths congruent 	 All sides lengths congruent
Name:	Name:	Name:
7.	8.	9.
 Quadrilateral 	 Quadrilateral 	 Quadrilateral
 Trapezoid 	 Trapezoid 	 Trapezoid
• Parallelogram	 Parallelogram 	• Parallelogram
 Rectangle 	 Rectangle 	• Rectangle
 Rhombus 	• Rhombus	 Rhombus
o Square	• Square	• Square
Name:	Name:	Name:

BONUS: What is the name of an twelve-sided polygon with all sides congruent?
